I have noticed several people have installed catch cans in the PCV circuit on their LS engine. How necessary are these? I understand the purpose but don't want or need the expense if it's going to save me a bottle of oil every oil change. \$80-100 is steep compared to a \$6-7 qt bottle of Mobile 1. It takes a LOT of oil to pay for that expense.

The vacuum port for the Brake Booster is located at the rear of the intake manifold for the LS3 6.2L engine. If this is not used it needs to be capped off. For the LC9 5.3L engine there is a plug in the rear of the intake manifold. A nonadjustable fuel pressure regulator with a 60 psi fuel pressure setting is required.

LS3 PCV help ok so I've looked at billavista's LS2 wright up and it has gotten me close but I have a couple questions since the LS3 that I'm working on has a couple differences. First this is going in a 4400 car (that probably doesn't matter), it has a 102mm throttle body (BBK drive by wire) and it has no PCV port in it, the motor also has a ...

A breather atop each valve cover is usually all that's needed. Of course, replacing one with a PCV valve to introduce a bit of vacuum into the system and to redistribute the unburned hydrocarbons back into the engine via the carburetor or throttle body yields a cleaner and much more environmentally friendly solution.

Has anyone got a solution for installing the air intake in the 33HR using an LS3 engine? The intake is 4" diameter and the install manual says the mass flow meter needs to be 10" away from the throttle body. With that 10" plus the cone filter. I'm not seeing a way to fit this in? Suggestions anyone?
