Set the Date Manually from the Linux Terminal. If your system is running ntpd, and you've set your timezone correctly, you shouldn't have to change this setting. However, if you find you need to set the system clock manually, use the --set option. In this example, we're setting the date and time to 9:14pm on Thursday, April 13, 2017:

The `date` command under UNIX displays date and time. You can use the same command set date and time. You can use the same command set date and time. You must be the super-user (root) to change the date and time on Unix like operating systems.

**UNIX Date Command Examples - nixCraft**

You can use e.g. `date --set='-2 years'` to set the clock back two years, leaving all other elements identical. You can change month and day of month the same way. I haven't checked what happens if that calculation results in a datetime that doesn't actually exist, e.g. during a DST switchover, but the behaviour ought to be identical to the usual "set both date and time to concrete values ...
