Hi I have peugeot 306 gti 6, and I have overheating problem. Temp goes up to 100 degrees and stops there, and sitting between 90-110. Heater inside car blows cold air, even if I put on hot. Help please, as I'm scared I could suffer up engine.

### **Peugeot 306 Overheating Problems | DIYnot Forums**

Hi, I'm new to this so sorry if this has been answered before. I recently bought a Pug 306 XSI 1996. Everything seemed fine at first, but now it is overheating and the radiator is cold. Both pipes are hot, but the heater is blowing lukewarm air (not sure if that's relevant). First thing I noticed was what I thought was a water leak, but it turned out to be water being pushed back out of the ...

### **Peugeot 306 XSI overheating? | Yahoo Answers**

Regarding A/C, it's likely to have no gas in it (the light will still work but nothing else) as the sensors will not enable the system if the gas pressure is too low, typical points to fail on a 306 are the A/C pipes where they pass along the bottom of the radiator area, this problem is highly likely to NOT be related though to your overheating ...

Peugeot 306 XSi head gasket failure? or other reason for overheating? I have done a couple of long drives over the last week, and noticed that the engine seems to be overheating when coming to a stop in traffic, or signals etc (reaching 90-100 degrees, although not hitting the red marker, yet.). The temperature seems fine when moving at speed.

Here's some tips I learnt recently from a Peugeot mechanic to do with a 306 overheating problem: - With the engine running, feel the top radiator hose. The thermostat valve should open at about

90deg, so the hose should become very hot. If it doesn't, while gauge temp continues rising, then the thermostat is not opening and is suspect.

### **Peugeot 306 overheating! HELP - aussiefrogs**

peugeot 306 Overheating. I recently purchased a 1993 1.4 306xl, and it had had it head gasket changed about 7 months ago, but not really used since. I am trying to work out what is making it over heat, any ideas? I wouldnt have thought it would be the head gasket, since it drives fine (apart from the overheating), and it has no mayonaise or anything like that.

my pug 306, keeps overheating. I have to refill the coolant res everyday b4 driving it. Have replaced the rad cap, have taken it to the garage where they now think im mad as there are no visible leaks. It seems to cool down a bit when i put the ac on. Can someone help with this so i can know exactly what the problem is and get it fixed.

I have a 307SW that has a strange overheating problem. Staring from cold the car will run for around 5km, showing normal temperature as the engine heats up. Then the heat gage will rise to the red section, the red "STOP" warning signal flashed on the instrument panel and the computer display will show an "STOP, Engine too hot..." warning.
