Video of the Day. Differential pressure switches are a particular type of pressure switch that convert a change in the pressure between two systems into an electrical function. The two systems are constantly monitored, and their relative pressure is measured. When one of the two systems experiences a change in pressure,...

High Static Operation - Weatherproof Differential Pressure Switch. Both are well-suited for low-to-high differential pressure process or fluid power applications where high and varying static pressures, high over-range, proof, shock pressure or cycle rates are expected. They may be field-mounted and are configured for use in non-hazardous locations.

High Static Operation - Weatherproof Differential Pressure ...

Hydraulic. In dust control systems (bag filter), a pressure switch is mounted on the header which will raise an alarm when air pressure in the header is less than necessary. A differential pressure switch may be installed across a filter element to sense increased pressure drop, indicating the need for filter cleaning or replacement.

Switch Operation. When the set pressure is reached, the contacts open again, turning off the pump. Some switches in the water line work with a diaphragm pressing against a piston and spring inside the unit. The spring pressure is set by an adjustment screw. Sufficient pressure on the diaphragm keeps the switch "off.". When the pressure drops, the switch activates.
