In a pure mathematical approach, the solution to the problem $Ax = b$ is simply $x = A^{-1}b$, where A^{-1} is the inverse matrix. But in most applications, it is advisable to solve the system directly for the unknown vector x rather than explicitly computing the inverse matrix. In applied mathematics and in many applications, it can be a daunting

Numerical analysis is also concerned with computing (in an approximate way) the solution of differential equations, both ordinary differential equations and partial differential equations. Partial differential equations are solved by first discretizing the equation, bringing it into a finite-dimensional subspace.
