M&M offers our “poppet-style” IBOP valves that automatically stop uncontrolled flow back and
protect the swivel, kelly hose and surface pumping equipment from high pressure kicks and
potential blow-outs. These valves can be installed anywhere in the drill string and will automatically
open to allow normal circulation.

innovative TDS-11SA Top Drive Drilling System. Varco engineering has made use of the recent
advancements in AC technology by designing the TDS-11SA to be powered by two AC drilling
motors (either 400 or 350 hp each, depending on the configuration). These 800-hp and 700-hp
systems produce 32,500 and 37,500 ft lb of drilling torque respectively.

A blowout preventer (BOP) is a large, specialized valve or similar mechanical device, used to seal,
control and monitor oil and gas wells to prevent blowouts, the uncontrolled release of crude oil
and/or natural gas from a well. They are usually installed in stacks of other valves. Blowout
preventers were developed to cope with extreme erratic pressures and uncontrolled flow (formation
