### Transmission Flywheel Engine

A transmission flywheel is a device used to apply the torque and horsepower of the engine to the drive line of a stick shift-equipped vehicle. Made of heavy cast iron, steel or aluminum with a steel insert, the transmission flywheel provides half of the surface that the vehicle's clutch disk operates on. The weight of the stock transmission flywheel aids in building inertia, which is used to ...

### What is a Transmission Flywheel? (with pictures)

The flywheel (if manual) or flex plate (if automatic transmission) is a disc that is bolted to the crankshaft at the rear of the engine. It serves several purposes: On a manual transmission vehicle, it provides one of the friction surfaces for the...
