Prove that Laplace's equation  $u = 0$  is rotation invariant; that is, if  $O$  is an orthogonal ...  $(Ox) \cdot \nabla u = 0$  then  $v = 0$ . Solution: Let  $y := Ox$ , and write  $O = (a_{ij})$ . Thus,  $v(x) = u(Ox) = u(y)$  where  $y_j = \sum_{i=1}^n a_{ij} x_i$ . This then gives that ...

In mathematics, a partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a computer model. A special case is ordinary differential equations (ODEs), which deal with functions of a single ...

In this chapter we introduce Separation of Variables one of the basic solution techniques for solving partial differential equations. Included are partial derivations for the Heat Equation and Wave Equation. In addition, we give solutions to examples for the heat equation, the wave equation and Laplace's equation.

### **Differential Equations - Partial Differential Equations**

Ordinary and partial differential equations occur in many applications. An ordinary differential equation is a special case of a partial differential equation but the behaviour of solutions is quite different in general. It is much more complicated in the case of partial differential equations caused by the
