OBD II monitors the performance of the vehicle's power train (engine, transmission) and emission control systems. If the OBD II system detects a problem that could cause elevated emissions, it alerts the driver by illuminating the malfunction indicator lamp ("MIL") or "Check Engine" light.

### Onboard Diagnostics - NYS Dept. of Environmental Conservation

Toyota's new Dynamic Force Engine adopts high-speed combustion technologies and a variable control system. It also achieves greater thermal efficiency, resulting in high output, due to a reduction in energy loss associated with exhaust and cooling systems, the movement of mechanical parts, and other aspects. As a result, the newly developed 2.0-liter gasoline vehicle and hybrid vehicle engines ...

The check engine light indicates that the computer has detected a malfunction in the engine/emission control system and has diagnostic codes and data stored which would be essential in diagnosing the problem. A technician with a scanner can access the diagnostic codes and data and then be able to give you a diagnosis. Same goes for the VSC light.
