I have finally convinced upper management to calibrate all test and measurement equipment. The engineering manager does not want his equipment calibrated due to expense and he says that nothing is used in production. All engineering equipment is R & D only supposedly.

Calibration of Engineering R&D Measurement Equipment or Not

Calibration of Temperature Measuring Devices - Calibration... The thermocouple is the temperature device calibrated but the standard laboratory thermometer is the device that would give accurate results. The goal of calibration is to minimise any measurement uncertainty by ensuring the accuracy of test equipment.

Title Maintain and calibrate density monitoring equipment ...

Calibration is a comparison between a known measurement (the standard) and the measurement using your instrument. Typically, the accuracy of the standard should be ten times the accuracy of the measuring device being tested. However, accuracy ratio of 3:1 is acceptable by most standards organizations.

Why Calibration of Your Measuring Instruments is Important ...

Electronics Resources. Calibrating an instrument involves comparing the measurements of two instruments; one with a known magnitude or correctness (standard device), against which you

measure the unit under test. Calibration has been defined by the International Bureau of Weights and Measures as an "Operation that, under specified conditions,...
