And before I deal with these equations in particular, let's just remind ourselves about when we might have one or infinite or no solutions. You're going to have one solution if you can, by solving the equation, come up with something like  $x$  is equal to some number. Let's say  $x$  is equal to-- if I want to say the abstract--  $x$  is equal to  $a$ .

Only the solution  $h = 17$  gives  $a$  and  $b$  positive and it is the length of the hypotenuse of the triangle. As an exercise, find  $a$  and  $b$  and see if  $a$ ,  $b$  and  $h$  satisfies Pythagora's theorem. More math problems with detailed solutions in this site.

Solution. more ... A value, or values, we can put in place of a variable (such as  $x$ ) that makes the equation true. Example:  $x + 2 = 7$  When we put 5 in place of  $x$  we get:  $5 + 2 = 7$   $5 + 2 = 7$  is true, so  $x = 5$  is a solution. See: Variable. Solving Equations.

**Solution Definition (Illustrated Mathematics Dictionary)**

SOLVING EQUATIONS. The value of the variable for which the equation is true (4 in this example) is called the solution of the equation. We can determine whether or not a given number is a solution of a given equation by substituting the number in place of the variable and determining the truth or falsity of the result.
