First post here so let's jump right in...as the title says, my stove is a Burning Log Turbo 10 Hi-tec. This winter I feel as I'm starting to understand how the thing works but yet I'm still confused. I've recently learned it is a catalyst stove. I gave the cats a good blowing out with compressed air.

I have a fairly old 2nd hand Turbo 10 tiled wood burner and the way its going I think the Cold Air isnt entering the firebox properly. I remember seeing advertising material for these and they showed how air was circulated around the firebox as a 'preheater' before being burnt. I have checked the top damper to ensure its opening and I dont think the chimney is restricted because with the door ...
