# **Toyota 2I Engine Fuel Consumption**

The L family first appeared in October 1977, it is a series of inline four-cylinder diesel engines. It is the first diesel engine from Toyota to use a rubber timing belt in conjunction with a SOHC head. Engines like 2L-II and 2L-T are still in production to the present day. Vehicles with the diesel engine were exclusive to Toyota Japan dealership locations called Toyota Diesel Store locations ...

### Toyota L engine - Wikipedia

Note: Toyota, in 1987, began assigning dual letter engine codes to some of the "engine family" categories in some engine lines, particularly six cylinder models. This can create potential confusion. E.g. 1MZ-FE – This is not a supercharged, narrow angle, fuel injected M-series engine, but a narrow angle, fuel injected MZ-series engine.

# List of Toyota engines - Wikipedia

Engine technology is one of Toyota's greatest assets. Toyota's award winning engine range reflects the high design and quality standards set by its engineers. All Toyota engines are developed for performance and responsiveness with a big focus on reducing emissions and saving fuel. So today TGS can pass on these benefits to customers.

Powertrain: The base 136-hp 2.2-liter 4-cylinder DOHC engine is fairly quiet and easy to maintain. The optional 194-hp 3.0-liter V6 is smooth and offers plenty of power. Both engines have a timing belt (for 2000 and 2001 Camry, Toyota recommends replacing the timing belt every 90,000 miles). Both are very good reliable engines; with good maintenance you shouldn't have too many problems with ...

I am interested in fuel efficiency as regards the engine capacity. For example, a 2L inline-4 versus a 6L V8. Generally in magazines or when shopping for new cars you see the stickers on the window saying it uses so many liters per 100km. So taking a typical japanese inline-4 2L you might see, say, 8L/100km fuel consumption. Whereas, for a 6L ...

# Engine size/type (ie. 2L inline-4) and fuel consumption ...

The amount of fuel consumed depends on the amount of air consumed. The amount of air consumed is going to depend on: Engine displacement (2L) Engine speed (6000 rpm, which is 3000 cycles/min for a 4-stroke) Volumetric efficiency - how efficiently the engine exchanges air Manifold air pressure - how much is the engine being throttled?

# How much fuel is used by a 2 litre, 4 cylinder, 4 stroke ...
