Preface Abstract PHP, which stands for "PHP: Hypertext Preprocessor" is a widely-used Open Source general-purpose scripting language that is especially suited for Web development and can be embedded into HTML.

PHP Manual - UP
The expression (expr1) ?(expr2) : (expr3) evaluates to expr2 if expr1 evaluates to TRUE, and expr3 if expr1 evaluates to FALSE. Since PHP 5.3, it is possible to leave out the middle part of the ternary operator. Expression expr1 ?: expr3 returns expr1 if expr1 evaluates to TRUE, and expr3 otherwise.. Note: Please note that the ternary operator is an expression, and that it doesn't evaluate to ...

PHP: Comparison Operators - Manual
The php.ini directives handled by extensions are documented on the respective pages of the extensions themselves. A list of the core directives is available in the appendix. Not all PHP directives are necessarily documented in this manual: for a complete list of directives available in your PHP version, please read your well commented php.ini file.

PHP: The configuration file - Manual
Documentation. The PEAR documentation is a centralized place where developers can add the documentation for their package. Currently the documentation is available in the following languages:

Documentation - pear.php.net
Note that it is in most cases much more efficient to use preg_replace_callback(), with a named function or an anonymous function created with create_function(), instead of the /e modifier.

PHP: preg_replace - Manual
Return Values. Returns a string containing the calculated message digest as lowercase hexits unless raw_output is set to true in which case the raw binary representation of the message digest is returned.

PHP: hash - Manual
imagecopyresampled() copies a rectangular portion of one image to another image, smoothly interpolating pixel values so that, in particular, reducing the size of an image still retains a great deal of clarity. In other words, imagecopyresampled() will take a rectangular area from src_image of width src_w and height src_h at position (src_x,src_y) and place it in a rectangular area of dst_image ...

PHP Manual
Parameters. variable. Value to filter. Note that scalar values are converted to string internally before they are filtered.. filter. The ID of the filter to apply. The Types of filters manual page lists the available filters.. If omitted, FILTER_DEFAULT will be used, which is equivalent to FILTER_UNSAFE_RAW.This will result in no filtering taking place by default.

PHP: filter_var - Manual
A word of warning! It may seem obvious, but remember, when deciding whether to use __get, __set, and __call as a way to access the data in your class (as opposed to hard-coding getters and setters), keep in mind that this will prevent any sort of autocomplete, highlighting, or documentation that your ide mite do.

PHP: Overloading - Manual
